RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 96 pages. Original publisher: Washington, D. C. : United States Environmental Protection Agency, Office of Research and Development , 2006 OCLC Number: (OCOlc)191749399 Subject: Watersheds. Excerpt: . . . WHAT IF consists of models of varying complexity, suited to the problem needs of the manager rather than imposing a one model fits all needs restriction. In this manner, the toolset is question driven as opposed to model-focused. WHAT IF is stream-based, permitting users to evaluate streams of interest for outcomes of management approaches and specific restoration actions. Habitat quality and aquatic ecosystem response models have been linked to a regional hydrologic model that simulates habitat characteristics ( e. g. , water depth, current velocity and water temperature ) that determine the survival, reproduction, and recruitment of fish and aquatic invertebrates. To facilitate the use and application of these models, graphical user interfaces ( GUI ), supporting databases, and libraries of management scenarios were developed. The Canaan Valley Institute ( CVI ) software toolset is a stream-based decision support tool that is object-oriented in design and easily maintained. Ultimately, what has been developed, using available data collected by the USEPA Environmental Monitoring and Assessment Program ( EMAP ), is a framework based on the biogeography of fish suitable for applying all models for regional assessments of important fish health issues in the Mid-Atlantic Highlands. The EMAP surface water dataset ( <http://www.epa.gov/nheerl/arm> ) is a stratified, random sampling design containing over 300 sites and 600 samples ( multiple site visits ) used in the final research product ( Figure 1-2 ). Fish count data were pre-processed by conversion to biomass for both clustering and habitat suitability analyses, using a utility model associated with the BASS...
